June 2025

Dear Members,

What a busy past month we have had. Firstly, our Young Bird Selection Show held at the Mt Larcom bird pavilion. We had a fair turnout of members and their birds, but could have had some more, if only some of our beginner members were more confident in their birds. I am pretty sure if some of those birds were shown they would have been selected to go to the Zone selection in Mackay and possibly to the Nationals in Cairns. Maybe next year. Congratulations to those members that were successful in getting birds selected to the Zone Selections in Mackay.

Next up was the NQBZ Inc. annual general meeting on the 17th of May with Bil Schultz our newly elected zone president and Bruce Schuster our new treasurer. At this stage we don't have a secretary and if any of our members would like to put their hand up to fill this position our club would nominate you. Please give it some thought.

The following day Sunday the 18th of May saw the zone selections start nice and early with an almost full team selected for the Nationals in Cairns. We were short 2 Opaline AOSV, a variety we need to work on. Congratulations to those members that had birds selected. Our club was again successful in retaining the Brian West Shield showing the depth of quality birds across the varieties.

A week later and on to Cairns and all I can say is if you didn't or couldn't go you missed a great weekend. Truly exceptional birds judged and on display in a great venue. Although our North Queensland team didn't win a class this year, we had consistently high placings to give us the highest team total ever. Congratulations to all our members who got birds to the Cairns Nationals and a big congratulations to those members whose birds got on the top shelf and especially those that had birds run high placings. Great rewards for your efforts throughout the year. The results of our Young Bird Selection Show and the Zone Selections appear in this newsletter; I didn't include the National results as they are available on the ANBC web-site www.anbc.org.au

I have had many positive comments about the running of the Nationals in Cairns and this is in no small part by many of our club members along with members from our fellow clubs in putting many hours and effort to make our zone proud and appreciated in hosting a Truly memorable Nationals. I will not name anyone but thank you from our club executive to all those wonderful enthusiasts.

Next up was our club auction on Sunday the 8th of June and didn't we have some outstanding birds entered from a wide range of breeders. I hope everyone was able to pick up some bargains and the varieties they were chasing. A very big thank you to our members and especially to those from other clubs that helped in setting up the hall prior to the auction at 5am Sunday morning due to the hall being unavailable to us Saturday afternoon, and again at the conclusion. The pre-auction dinner on the Saturday night was a great event with great company, a jovial atmosphere and good food, a great start to a great weekend. We also thank Applied Nutrition for supporting us by supplying product for our auction raffles, please support them by purchasing their products whenever you can. Thanks also go to Wayne Robinson and his ABS crew for again bring the ABS trade table. Also, to Ron Woodhead of Noah's Pet Supplies for his trade table. Again, please support those that support us.

Please note that there has been a change to the calendar. As I will be away for the July meeting Kev O'Callaghan will now do his presentation at this meeting and I will do mine at the October meeting.

Russell Ogden
(Editor, Feathered Tales of the CBS) ogdenrc@bigpond.com

AS YOU GET OLDER...

You'll realise that a \$1000 watch and a \$30 watch both tell the same time.

That a Michael Kors wallet and a Forever21 wallet both hold the same amount of money.

A \$1,000,000 mansion and a \$40,000 house both host the same loneliness.

A Ford will drive you as far as a Bentley.

True happiness is not found in materialistic things.

It comes from the love and laughter found with each other.

Stay humble.. the holes dug for us in the ground are all the same size.

MEMBERS INFORMATION PAGE

- **Committee Members:** Confirmed at AGM

-

President:	Russell Ogden	0437 025 793
Vice-President:	Kev O'Callaghan	0411 956 345
Treasurer:	Michael Evans	0409 160 569
Secretary:	Shayla Evans	0408 731 846

- EMAIL Addresses: To allow for more efficient distribution of club information, please forward a test email or your email address to cbudgerigars@gmail.com and for newsletters to ogdenrc@bigpond.com ***Thanks to all those who have forwarded these details previously.***
- **SHOW & WIN!!!!!!** Starting at our 2025 Breeders Show, you will become eligible to win a \$200 Credit at our Annual Auction by showing at the 3 Major Shows (Breeders 2025, Annual 2026, Young Bird Show 2026). You will receive one ticket for showing 1 to 10 birds, 2 tickets for 11 to 20 entries, etc. After the Young Bird Selection Show in 2024, the winner will be drawn. The more you show, the better chance you have to win. It is only open to CBS Inc members. You must show at all 3 shows unless you are judging the show or are genuinely ill or have a family emergency. The aim of this incentive is to encourage members to show consistently at all 3 shows.
- Services Section: The Club Shirt is now being worn by many members. If you want to purchase one, contact Shayla Evans 0408 731 846 (Please do not call after 7:00 pm) Shayla will also have a supply of 2024 rings, (65 cents each and sold in lots of 25, postage is extra \$5.00) and show cages and cage fronts if anyone needs some.
- Future CBS Variety of the Year are as follows: 2025: - Greywing. 2026: - Crested. These are judged at the Annual Show each

Avian Files

The respiratory system of parrots: a powerful but fragile organ

Based on Avian Files publication about the respiratory system of the parrot.

The respiratory system of parrots is very efficient, allowing for a constant intake of oxygen, even during the expiration. However, this effectiveness also makes it extremely vulnerable to fumes, chemicals and household pollutants.

1. Structure of the respiratory system

The respiratory system of parrots includes:

The nostrils: located at the base of the beak, they allow air to enter.

The trachea: a cartilage tube that transports air to the lungs.

The syrinx: the vocal organ of birds, located at the bifurcation of the trachea.

Primary bronchia: they conduct air to the lungs and air bags.

Lungs: fixed and non-expandable, they ensure gas exchanges.

The air bags

Parrots have nine air bags, which act as a ventilation system that allows constant air to pass through the lungs:

Cervical air bags (2)

Interclavicular Air Bag (1)

Anterior chest air bags (2)

Posterior chest air bags (2)

Abdominal Air Bags (2)

These air bags allow for continuous breathing, but they also play a role in thermal regulation.

2. One way airflow and continuous oxygenation

Unlike mammals, parrots don't have a diaphragm. Their breathing depends on the movements of the sternum and thoracic muscles:

During inspiration, fresh air enters the posterior air bags and some of it goes directly into the lungs.

Upon expiration, air from the rear bags passes into the lungs for additional gas exchange, while worn air is expelled by the anterior air bags.

This system provides constant oxygenation and is one of the most effective in the animal kingdom. However, it also makes parrots extremely vulnerable to toxins hanging in the air.

3. Extreme sensitivity to smoke and chemicals

The respiratory system of parrots is very extensive, with a large exchange surface that extends even into some bones, such as the humerus (wing) and the femur (paw). This particularity makes them very susceptible to smoke and toxic emission, which can cause serious respiratory problems or even sudden death.

Cooking fumes and the danger of Teflon

Among the most unknown hazards, kitchen fumes are a major threat to parrots:

Teflon (polytetrafluoroethylene or PTFE): found in many non-stick pans and cooking appliances, it emits invisible, odorless toxic fumes when overheated (about 260°C - 500°F).

These emanations are deadly to parrots in minutes, causing fatal lung hemorrhage.

Self-cleaning ovens: in self-cleaning mode, the ovens heat at a high temperature, releasing toxic fumes for birds.

Burnt oils and fats: Combustion of oil, butter, or other greasy materials can produce harmful fumes.

Burnt plastic emissions: A simple forgetfulness of a plastic container in an oven or on a hot plate can poison a parrot in seconds.

Other products to avoid

Parrots should never be exposed to the following substances, which can be fatal:

Smoke a cigarette

Softener sheets for the dryer

Scented detergents

Carpet Fresheners

Cleaners for windows and other household products

Perfumes and waters of cologne

Scented candles

Fresh paint job

Smoke from the fireplace

Fumigation against termites

art supplies (fixer, pigments)

Aerosols of all kinds

Hairspray

Cleaning solutions

New carpets

Air fresheners

Kitchen Smoke / Teflon / Non-stick Pan Steamers

Precautions in case of working or using chemicals

If you need to use paints, power cleaners or spray:

Remove the parrot from the premises for at least 7 days to avoid exposure to emanations.

Air the house thoroughly before you bring it back.

Choose natural, non-toxic products for your home maintenance.

4. Rethink the environment of your parrot

When understanding how fragile their respiratory system is, it's essential to reconsider our home environment to ensure their safety:

Replace Teflon pans with stainless steel or cast iron.

Avoid scented candles, incense, and mood perfumes.

Limit the use of sprays and chemicals.

Always ensure adequate ventilation.

Keep your kitchen well aired when cooking.

Never leave your parrot in a freshly painted or cleaned room with aggressive products.

Many common items in a home are harmless to humans, but extremely toxic to parrots.

Adapting your environment is a preventive act essential for their well-being and longevity.

⚠️ WARNING: WING SIZE IMPACT ON PARROTS' RESPIRATORY SYSTEM ⚠️

Wing size is a controversial practice that can severely impact the respiratory health of parrots. Many think it's just a safety measure to prevent a parrot from flying away, but the physiological consequences can be catastrophic.

1. A respiratory system designed for flight

The respiratory system of parrots is closely linked to their ability to fly. Their air bags are not only used to breathe, but also to lighten their bodies and regulate their temperature during the flight. A private parrot with the ability to fly can no longer use its respiratory system properly, leading to many health problems.

🔴 MAJOR CONSEQUENCES OF WING SIZE ON BREATHING 🔴

1 Bad airing of the airbags

When parrots fly, air flows more efficiently through their airbags and lungs. A private bird in flight breathes less deeply, which can lead to poor blood oxygenation and general weakening.

2 Lung problems and infections

Low air circulation in airbags can promote the accumulation of bacteria and fungi, increasing the risk of respiratory diseases like aspergillosis. Birds that do not fly have more secretions in their respiratory tract, which can lead to chronic infections.

3 Difficulty regulating temperature

Flight allows parrots to dissipate heat and regulate their body temperature. A private flight parrot is at risk of overheating more easily and suffering heat strokes.

4 Stress and behavioral disorders

A private-flight parrot is often frustrated and stressed, which increases the production of cortisol, a stress hormone. Chronic stress weakens the immune system, making the bird more vulnerable to respiratory infections.

5 Decrease in muscle and cardiac capacity

Flying strengthens the chest muscles and improves cardiorespiratory capacity. A parrot with severed wings loses muscle strength and risks developing long-term heart and respiratory problems.

🔴 CLIPPING YOUR WINGS CAN BE A LONG-TERM DOOM 🔴

A parrot that can no longer fly sees its respiratory health deteriorate gradually. It's not just about mobility, it's a direct access to your physical and mental wellbeing.

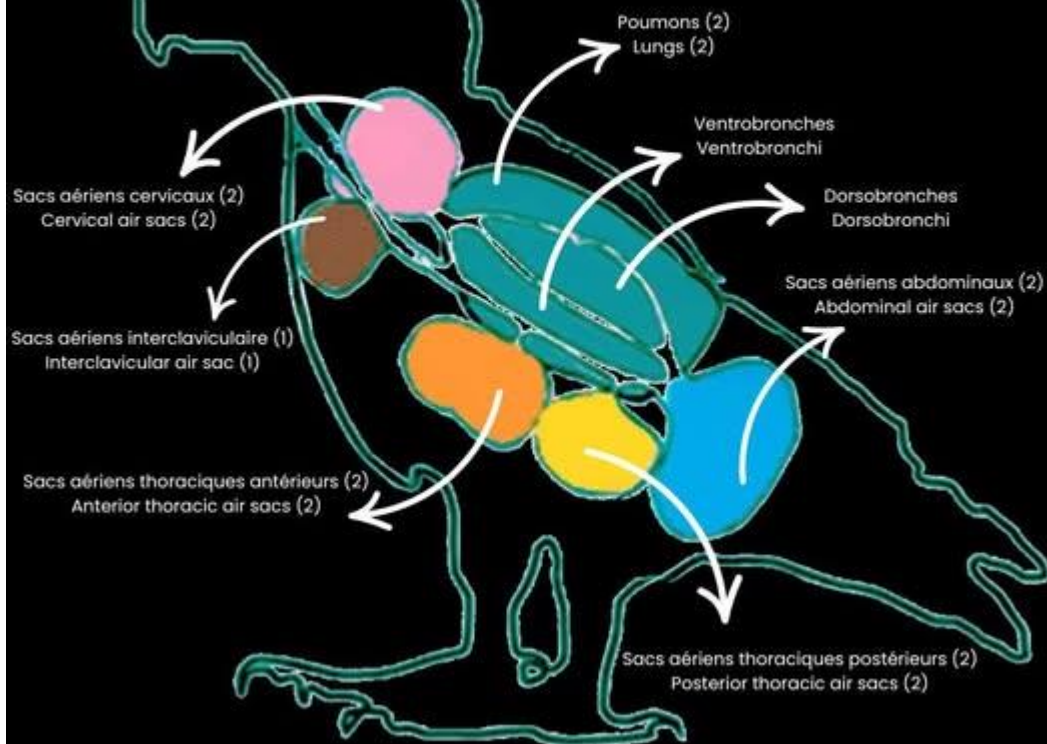

Conclusion

The parrot's respiratory system is designed to maximize oxygenation, but this effectiveness also makes it extremely vulnerable to pollutants. Being aware of the dangers of Teflon, cooking fumes, chemicals and toxic emissions, we can adapt our environment to provide them with a healthy and safe living space.

Australian Wildlife Supplies

Hi, we would just like to let you know that **Australian Wildlife Supplies** are now going to do a **Seed Run up North every 3 months** starting our first run on the **2nd, of September** to order people can email, send sms ph or order online, if you could please let all the members know would be appreciated.

Seed Prices are as follows

MIXES

Finch Mix	\$40
Budgie Mix	\$42
Canary Mix	\$42
Sm Parrot	\$40

PLAIN SEEDS

Red Panic	\$40
Yellow Panic	\$43
W/French Millet	\$38
Panorama Millet	\$38
Jap Millet	\$38
Canary Seed	\$46
G/Stripe Sunflower	\$44
Rape Seed	\$29
Hulled Oats	\$32

Orders over 10bags are discounted by 10%
